## Recommendation: EMRAX Motors

Nessmann Boote is a Company wich is converting petrol speedboats to electric Drivetrains since 2008.

Since 2012 we are using Emrax Motors and we are really happy with it!  
The most problem in planning boats is the fact, that high power is continously needed and before we used EMRAX Motors we burned every kind of electric motor!

Thanks to the high Eta of the Emrax motor (98 %) , it generates much less Heat then other ones,also the power to weight ratio is unbeaten.

The support of Mr. Susnik can not be better. He knows exatcly the problems of clients and react directly to this and have great solutions!

He is always improving the Emrax Motors to get even higher performance and lower the internal resistance!

For our team is clear that we will not change to other motors because better ones ,they simply dont exist!

Maybe sometimes for new clients the datas look too good, that people get sceptical, but all datas are real and its a fact that this motor is a true record machine.

Best regards  
Nessmann Thomas
