Graphs valid for EMRAX 268:

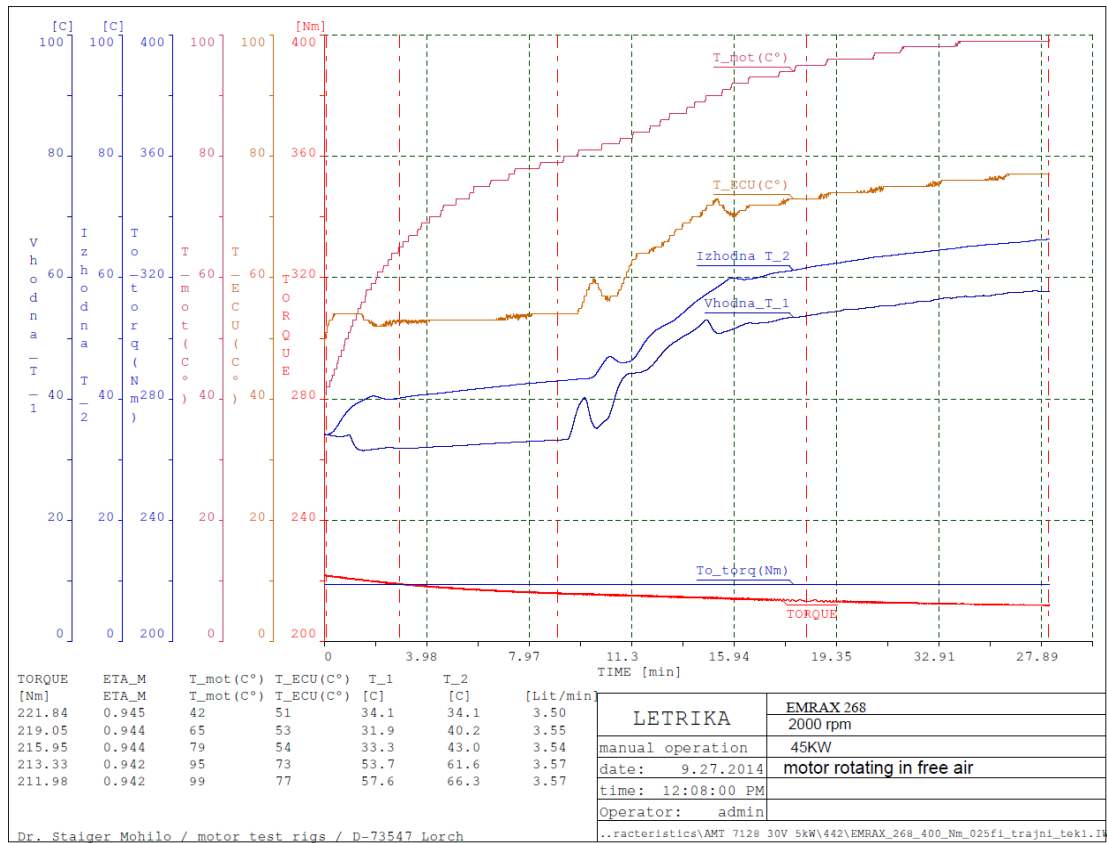

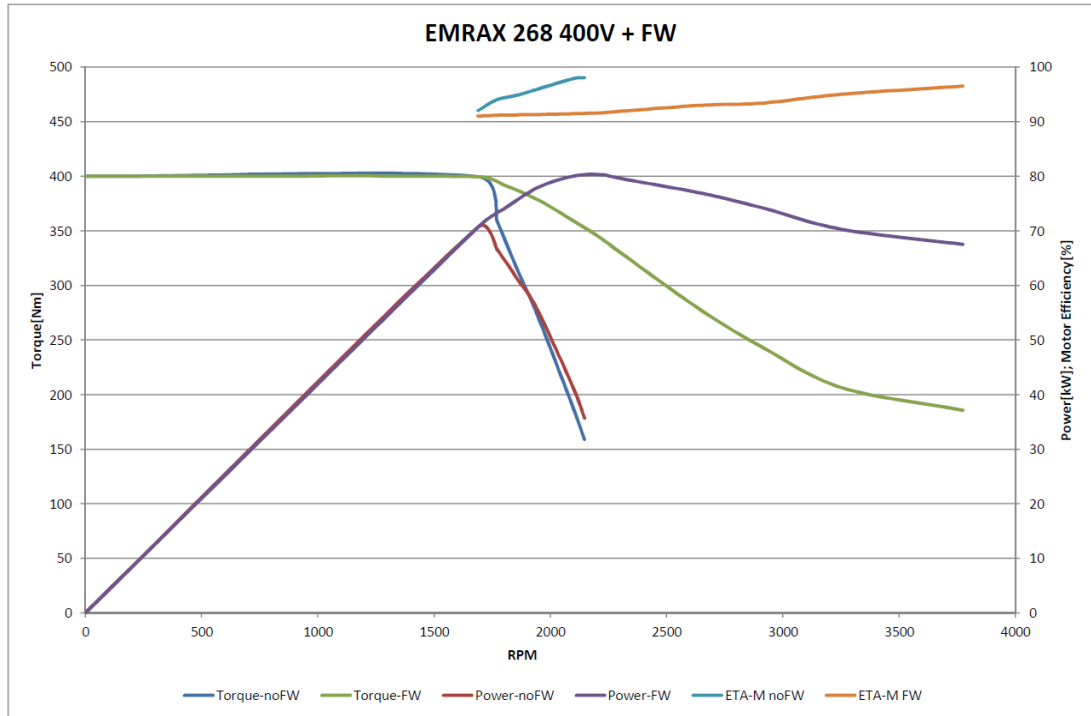

Note 1: for determining peak or continuous power (kW) you should choose motor speed and then read power from chosen power curve (in the left graph side)  
 Note 2: for determining peak or continuous torque (Nm) you should choose motor speed and then read torque from chosen torque curve (in the right graph side)

\*Graphs from testing in Letrika (2014):

**Graphs of EMRAX air cooled and liquid cooled type:**

The continuous power and continuous torque for air cooled motor is 20% lower and for liquid cooled motor is 15% lower.

**Graphs of the EMRAX 268 medium and low voltage motor type:**

Graphs of EMRAX 268 low voltage and EMRAX 268 medium voltage are similar to graphs of EMRAX 268 high voltage. The only differences are in the DC voltage and motor current. These two parameters can be read from the Technical Data Table for the EMRAX 268 low and medium voltage motor.

Low voltage motor needs 4 x higher current and 4 x lower DC voltage for the same power/torque and RPM, compared to the EMRAX 268 high voltage motor.

Medium voltage motor needs 1.52 x higher motor current and 1/3 lower DC voltage for the same power/torque and RPM, compared to the EMRAX 268 high voltage motor.
